Yuri Vieira Teixeira

Software Engineer | Java | Spring Boot | React | Python | Django

Nova Friburgo, Brazil | +55 22 99896-2216 | yurivieirateixeira98@gmail.com

linkedin.com/in/yuri-vieira-teixeira | github.com/DevYuriVieira | devyurivieira.vercel.app

PROFESSIONAL SUMMARY

Software Engineer with a focus on **Java (Spring Boot)** and **React**, with hands-on experience in **Python (Django)**, **REST APIs** and **PostgreSQL**. I build complete applications covering security, external integrations, generative AI and layered architecture. Over 910 h of hands-on software development training at Serratec and UECE. Postgraduate in Software Engineering. Advanced English (B2+), with a C1/C2 programme completed at Wizard. Open to international remote roles (Canada, Europe, US, Brazil). B2B / Contractor ready.

KEY ACHIEVEMENTS

Live Production App	Personal portfolio built with Angular 22, native Signals and a GPU-accelerated WebGL particle system, covered by 121 automated tests (Vitest, Playwright + Axe-Core and Cypress) and a 100/100/100/100 Lighthouse audit on desktop.
Zeiss AI Recommendation Platform	MVP built with an 11-person team for Zeiss, replacing manual prescription reading with OCR + AI-driven lens recommendations and real-time sales dashboards.
Programming Instructor	Teach Back-End Programming (Java/Spring Boot) to a class of 10 students at SENAI/FAETEC, creating all teaching material from the institution's syllabus.

TECHNICAL SKILLS

Languages	Java | Python | JavaScript | TypeScript
Frontend	React | React Native | Expo | Angular | Three.js / WebGL | HTML5 | CSS3
Backend	Spring Boot | Spring Security | Django | REST APIs | JPA/Hibernate | JWT | Zod
Databases	PostgreSQL | SQL | DBeaver | Query Optimisation (N+1 elimination)
Testing / QA	Vitest | Playwright | Cypress | Axe-Core
Tools	Git | GitHub | Docker (in progress) | Vercel | CI/CD | Swagger | Maven
Practices	Agile / Scrum | API-First | Clean Architecture

PROFESSIONAL EXPERIENCE

Back-End Programming Instructor (Java)

SENAI / FAETEC | Aug 2026 - present | Nova Friburgo, Brazil | *Evening, 6pm-10pm*

- Teach a class of 10 students in Back-End Programming covering programming logic (JavaScript), relational databases with DBeaver and PostgreSQL, **OOP in Java**, **REST APIs with Spring Boot**, closing with an integrative project.
- Create all teaching material (exercise PDFs, summaries, tutorials and support resources) from the institution's syllabus, plus one-on-one support for students.

Full-Stack Developer (Software Residency)

Serratec - TIC/Software Residency | Feb 2026 - Jul 2026 | Petropolis, Brazil | *790 h*

- Completed a programme in progressive tracks: logic, databases, **OOP in Java**, frontend, **RESTful APIs with Spring Boot**, **React and React Native**, closing with a full-stack final project delivered as a corporate MVP under contract, in partnership with Zeiss.
- Delivered practical projects at the end of each subject, from data modelling to responsive interfaces and API integrations.
- Worked in an **Agile team** with Git, code reviews and sprints, applying **OOP and clean-code standards** across all deliverables.

PROJECTS

Zeiss - AI Recommendation Platform

Collaborative (11 devs, 1 PO, 1 SM) | 2026 | React - TypeScript - Java 17 - Spring Boot 4 - PostgreSQL - JWT - OCR - n8n - REST APIs - Serratec Final Project · Corporate MVP (contract) · private repository

- Optical shop sellers, whether new or experienced, were reading prescriptions and choosing lenses by hand based on personal judgement, which made recommendations inconsistent from seller to seller. The team built a web platform (React/TypeScript front end, Java 17/Spring Boot 4 back end) that reads prescriptions automatically through OCR connected to an AI pipeline (n8n/RAG) and cross-references the extracted data with the patient's profile to suggest the right Zeiss lens, supporting sellers at any experience level.
- Store managers get a dashboard tracking each employee's individual performance, while Zeiss sees aggregated data across partner stores such as most recommended and best-selling lenses, conversion rate and seller ranking. JWT authentication backs a three-tier role hierarchy (Zeiss admin, store manager, employee) that limits what each user can see, with full CRUD for stores, products and employees, including deactivating lenses that are out of stock or discontinued.

Personal Portfolio - devyurivieira.vercel.app
Personal | 2026 | Angular 22 - TypeScript - Three.js / WebGL - SCSS - Vitest - Playwright - Cypress - PWA - **Live in production**

- Built with Angular 22 standalone components, native Signals (signal/computed) and OnPush change detection throughout, including a GPU-accelerated Three.js/WebGL particle system with mouse and touch interactivity, configured as a PWA with a service worker.
- Covered by 121 automated tests across three layers (66 Vitest unit tests, 38 Playwright E2E specs with WCAG 2.1 AA accessibility audits via Axe-Core, 17 Cypress E2E specs), with trilingual i18n (PT/EN/ES) and a 100/100/100/100 Google Lighthouse audit on desktop across Performance, Accessibility, Best Practices and SEO.

Payroll System - github.com/DevYuriVieira/payroll-system-java
Collaborative (4 devs) | 2026 | Java 17 - PostgreSQL - JDBC - MVC - DAO - Serratec OOP Final Project

- Automates INSS and IRRF payroll calculations under Brazilian tax law, reading employee data from CSV and persisting everything through raw JDBC in a layered MVC + DAO architecture, built without an ORM to reinforce the underlying SQL and OOP fundamentals.
- Uses BigDecimal throughout for monetary precision, a Singleton for the database connection, and custom domain exceptions to keep tax-calculation errors from silently propagating.

Aurora - Personal Growth Platform - github.com/DevYuriVieira/aurora-growth-platform
Collaborative (6 devs) | 2026 | React Native - Expo SDK 54 - TypeScript - React Navigation - Zod - AsyncStorage - Final Project - Multiplatform Applications

- A React Native/Expo app for tracking personal goals, mentorships and community activity, with session persistence (AsyncStorage), Context-API-protected routes, and a goals module with full CRUD.
- Combines three navigation patterns in one app (Drawer, Stack and Tabs), Zod-validated forms via React Hook Form, and native device features such as camera, gallery and maps/geolocation through Expo Location and Expo Secure Store, plus a community feed and QR-code-based event check-in.

Django Full-Stack E-commerce - github.com/DevYuriVieira/django-fullstack-ecommerce
Personal | 2025 | Python - Django - SQLite - Vanilla JS - REST API - Webhook

- A from-scratch e-commerce backend (auth, cart, coupons, orders) organised around a Service Layer, built to work through concurrency edge cases most tutorials skip, such as a webhook firing twice for the same order.
- The webhook is idempotent and wrapped in atomic transactions, the REST API is versioned and built without DRF, and the frontend is vanilla JS with a custom state manager, CSRF protection and XSS-safe DOM handling.

EDUCATION

Postgraduate Degree - Software Engineering
Estacio University | 2024 - 2025

Technology Residency - TIC/Software Full-Stack (790 h)
Serratec | Feb 2026 - Jul 2026

Technology Residency - TIC 12 (120 h)
Universidade Estadual do Ceara (UECE) | Oct 2025 - Dec 2025

Bachelor's Degree - Industrial Engineering
Estacio University | 2017 - 2022

CERTIFICATIONS

› **Software Testing (24h)** - Instituto de Pesquisas Eldorado
› **Front-End Development with Artificial Intelligence** - Senac
› **Programming in Python** - Senac
› **Philips Full-Stack Developer Bootcamp** - DIO
› **White Belt** - Lean Six Sigma - Frons
› **SQL Database** - Intermediate and Advanced - Instituto Matera
