PROFESSIONAL SUMMARY

Back-End Software Engineer specializing in **Java 21 LTS (Spring Boot 4 & Virtual Threads)** and **.NET 10 (C# 14 / ASP.NET Core)**, with hands-on experience in **RESTful APIs**, **asynchronous messaging (RabbitMQ & Transactional Outbox)**, **PostgreSQL** and **Clean Architecture / DDD**. I build secure (JWT, Spring Security, Keycloak OIDC), resilient distributed backend services backed by automated test suites (xUnit, JUnit 5 and k6). Over 910 h of software development training at Serratec and UECE. Postgraduate in Software Engineering. Advanced English (B2+), with a C1/C2 programme completed at Wizard. Open to national and international remote roles.

KEY ACHIEVEMENTS

Zeiss AI Recommendation Platform	Corporate MVP built with an 11-person team for Zeiss, integrating Java / Spring Boot 4.1 REST APIs, WebFlux, PostgreSQL 18, three-tier JWT role-based access control and an OCR + AI pipeline (n8n/RAG).
FleetOps API (.NET 10 & RabbitMQ)	Distributed architecture in C# 14 / .NET 10 with Clean Architecture, DDD, Transactional Outbox, RabbitMQ (DLQ), Keycloak OIDC, PostgreSQL 18 (SKIP LOCKED / xmin), 300 xUnit tests and 278 RPS ACID throughput on k6.
FarmFlow Backend (Java 21 & Virtual Threads)	Distributed engine in Java 21 LTS and Spring Boot 4.1 sustaining 2,450 req/s in k6 with zero 5xx errors, Transactional Outbox over RabbitMQ (CloudEvents), time-series partitioned PostgreSQL 17 with fail-closed RLS and 411 automated tests.

TECHNICAL SKILLS

Languages	Java 21 LTS (Java 17/21) | C# 14 (.NET 10) | SQL | TypeScript / JavaScript
Backend Frameworks	Spring Boot 3/4 | Virtual Threads | Spring WebFlux | Spring Security 6 | ASP.NET Core (.NET 10) | JPA / Hibernate | Entity Framework Core 10
Messaging & Security	RabbitMQ (CloudEvents v1.0, Publisher Confirms, TTL Retry, DLX/DLQ) | Transactional Outbox | Choreographed Sagas | Keycloak OIDC (RS256/JWKS) | JWT & RBAC
Databases	PostgreSQL 16–18 (Time-Series Partitioning, BRIN Indexes, Fail-Closed RLS, FOR UPDATE SKIP LOCKED, MVCC xmin, 3NF) | MySQL | N+1 Query Optimisation
Testing & Observability	JUnit 5 (411 tests under Virtual Threads) | xUnit (300 Unit/Integration/Fault-Injection tests) | k6 (Load Testing) | OpenTelemetry & Jaeger (W3C Tracing)
DevOps & Tools	Docker & Docker Compose | CI/CD (GitHub Actions) | Git | Linux / Nginx | DBeaver | Swagger / OpenAPI 3 | Maven | n8n (OCR & RAG)
Architecture & Practices	Clean Architecture | Domain-Driven Design (DDD) | Event-Driven Architecture | SOLID | Idempotency & Concurrency | API-First | Agile / Scrum

PROFESSIONAL EXPERIENCE

Back-End Programming Instructor (Java)

SENAI / FAETEC | Aug 2026 - Oct 2026 (Contract) | Nova Friburgo, Brazil

- Taught a class of 10 students in Back-End Programming covering programming logic, relational databases with **DBeaver and PostgreSQL**, **OOP in Java**, and **REST APIs with Spring Boot**, closing with an integrative project.
- Created all teaching material (exercise PDFs, summaries, tutorials and support resources) from the institution's syllabus, plus one-on-one support for students.

Full-Stack / Back-End Developer (Software Residency)

Serratec - TIC/Software Residency | Feb 2026 - Jul 2026 | Petropolis, Brazil | 790 h

- Completed a 790-hour intensive programme in progressive tracks with strong emphasis on **PostgreSQL Databases**, **OOP in Java 17** and **RESTful APIs with Spring Boot and Spring Security**, closing with a corporate MVP delivered under contract in partnership with **Zeiss**.
- Designed and implemented layered backend architectures (Controller, Service, Repository, DAO, DTOs), 3NF relational schemas, JWT/RBAC authentication and API integrations.
- Worked in an Agile team with Git, code reviews and sprints, applying OOP, SOLID and clean-code standards across all deliverables.

PROJECTS

Zeiss - AI Recommendation Platform

Collaborative (11 devs, 1 PO, 1 SM) | 2026 | Java 17 | Spring Boot 4.1 | Spring WebFlux | PostgreSQL 18 | JWT (RBAC) | n8n (OCR & RAG) | OpenAPI 3 - Serratec Final Project · Corporate MVP (contract)

- To replace inconsistent manual prescription reading across optical shops, the team engineered an enterprise REST API in **Java 17, Spring Boot 4.1 and PostgreSQL 18** featuring non-blocking multipart prescription streaming via **Spring WebFlux** `WebClient` to an **n8n (OCR & RAG)** webhook, automated extraction scoring (`ConfidenceAssessmentService`) and a multi-parametric Zeiss lens recommendation engine.
- Implemented **stateless JWT authentication (JJWT) with BCrypt, three-tier RBAC** (Zeiss admin, store manager, employee) and active session IP auditing, a transactional sales lifecycle state machine (`RECOMMENDED`, `SOLD`, `CANCELLED`), analytical aggregation endpoints for store conversion metrics and full CRUD documented with Swagger / OpenAPI 3.0.

FleetOps API (C# / .NET) - github.com/DevYuriVieira/fleetops-api

Personal | 2026 | C# 14 | .NET 10 | ASP.NET Core | PostgreSQL 18 | EF Core 10 | RabbitMQ | Keycloak OIDC | OpenTelemetry | xUnit

- Distributed, event-driven fleet and logistics REST API engine in **.NET 10 (C# 14)** (27 endpoints across 5 DDD Bounded Contexts: Vehicles, Drivers, Deliveries, Routes and Maintenance), operating as an OAuth 2.0 / OIDC Resource Server with **Keycloak (asymmetric RS256/JWKS validation)** and RBAC across four roles.
- Implements the **Transactional Outbox pattern** atomically inside DbContext eliminating dual-write hazards, multi-replica polling via `FOR UPDATE SKIP LOCKED`, optimistic concurrency with PostgreSQL `xmin`, **RabbitMQ** publishing (Publisher Confirms, 10s/30s/90s TTL retry queues and a Dead-Letter Queue), an idempotent consumer keyed by `MessageId`, and W3C distributed tracing with OpenTelemetry and Jaeger.
- Suite of **300 automated tests** (166 unit and 134 integration/fault-injection) in xUnit with 100% pass rate and empirical throughput of **278 sustained RPS** under ACID writes in PostgreSQL (k6).

FarmFlow - Distributed Agri-Tech Platform (Java 21) - github.com/DevYuriVieira/farmflow-backend

Personal | 2026 | Java 21 LTS | Spring Boot 4.1 | Virtual Threads | PostgreSQL 17 | RabbitMQ | Keycloak OIDC | OpenTelemetry | k6

- Self-driven project built around a real field problem: operators with no signal, spray logs required by Brazil's MAPA regulator, and irrigation pivot and silo telemetry. I designed a **Java 21, Virtual Threads and Spring Boot 4.1** backend that sustained **2,450 req/s** in k6 load tests with zero 5xx errors.
- Consistency without dual-writes: **Transactional Outbox** over **RabbitMQ** (CloudEvents v1.0, DLX, TTL and Dead Letter Queue), concurrent polling with `FOR UPDATE SKIP LOCKED`, choreographed sagas with advisory locks (`pg_try_advisory_xact_lock`) and end-to-end W3C tracing with OpenTelemetry.
- Data and security designed for scale and audit: **PostgreSQL 17** with declarative time-series partitioning, BRIN indexes and **fail-closed Row Level Security**; Keycloak 26.1 (OIDC) with IDOR enumeration protection (404 instead of 403) and **411 backend tests** running under 100 Virtual Threads.

Spring Boot E-Commerce API - github.com/DevYuriVieira/ecommerce-serratec-api

Collaborative (Serratec Residency) | 2026 | Java 17 | Spring Boot 3 | Spring Security 6 | PostgreSQL | JPA/Hibernate | Swagger/OpenAPI 3

- RESTful e-commerce backend built in **Java 17 and Spring Boot 3** structured in layers (Controller, Service, Repository and DTOs) to decouple business rules, handle concurrent inventory control, validate orders and protect domain entities from direct exposure.
- Implements custom security filters in the **Spring Security 6 filter chain for stateless JWT authentication** and granular Role-Based Access Control (RBAC), optimized relational mapping with **JPA/Hibernate on PostgreSQL**, and interactive OpenAPI 3 / Swagger UI documentation.

Dental Clinic Management System (DCMS) - github.com/DevYuriVieira/dentacare-management-system

Collaborative (6 devs - Serratec Residency 2026.1) | 2026 | PostgreSQL 16+ | Advanced SQL (DDL, DML, DQL) | 3NF Modeling | Database Indexing | SQL Views

- Transactional relational database system engineered in **PostgreSQL 16+** and strictly normalized up to **3rd Normal Form (3NF)** to centralize appointment lifecycle workflows (Scheduled, Completed, Canceled), N:N associative procedure histories (`consulta_procedimento`) and dentist records (CRO) with zero orphan data.
- Enforces business rules via **DDL constraints** (Regex validation for CPF and CRO, logical temporal check constraints and unique keys), strict referential integrity using `RESTRICT` and `CASCADE`, plus strategic **relational Indexes** and **analytical SQL Views** for operational and revenue reporting.

EDUCATION

Postgraduate Degree - Software Engineering
Estacio University | 2024–2025

Technology Residency - TIC/Software Full-Stack (790 h)
Serratec | Feb 2026 - Jul 2026

Technology Residency - TIC 12 (120 h)
Universidade Estadual do Ceara (UECE) | Oct 2025 - Dec 2025

Bachelor's Degree - Industrial Engineering
Estacio University | 2017 - 2022

CERTIFICATIONS

› **Programming in Python (Django) (168 h)** - Senac
› **SQL Database - Intermediate and Advanced** - Instituto Matera
› **Software Testing Fundamentals (24 h)** - Instituto de Pesquisas Eldorado
› **Philips Full-Stack Developer Bootcamp (Java, Spring Boot, SQL)** - DIO
› **White Belt - Lean Six Sigma** - Frons
