# Yuri Vieira Teixeira

Back-End Software Engineer | Java | Spring Boot | .NET / C# | PostgreSQL

Nova Friburgo, Brazil | +55 22 99896-2216 | yurivieirateixeira98@gmail.com
linkedin.com/in/yuri-vieira-teixeira | github.com/DevYuriVieira | devyurivieira.vercel.app

## PROFESSIONAL SUMMARY

Back-End Software Engineer specializing in **Java (Spring Boot & Virtual Threads)** and **.NET / C# (ASP.NET Core)**, with hands-on experience in **RESTful APIs**, **asynchronous messaging (RabbitMQ & Transactional Outbox)**, **PostgreSQL** and **Clean Architecture / DDD**. I build secure (JWT, Spring Security, Keycloak OIDC), resilient distributed backend services backed by automated test suites (xUnit, JUnit and k6). Over 910 h of software development training at Serratec and UECE. Postgraduate in Software Engineering. Advanced English (B2+), with a C1/C2 programme completed at Wizard. Open to national and international remote roles.

## KEY ACHIEVEMENTS

| | |
|---|---|
| **Zeiss AI Recommendation Platform** | Corporate MVP built with an 11-person team for Zeiss, integrating Java and Spring Boot REST APIs, WebFlux, PostgreSQL, three-tier JWT role-based access control and an OCR + AI pipeline (n8n/RAG). |
| **FleetOps API (.NET & RabbitMQ)** | Distributed architecture in C# and .NET with Clean Architecture, DDD, Transactional Outbox, RabbitMQ (DLQ), Keycloak OIDC, PostgreSQL (SKIP LOCKED / xmin), 300 xUnit tests and 278 RPS ACID throughput on k6. |
| **FarmFlow Backend (Java & Virtual Threads)** | Distributed engine in Java and Spring Boot sustaining 2,450 req/s in k6 with zero 5xx errors, Transactional Outbox over RabbitMQ (CloudEvents), time-series partitioned PostgreSQL with fail-closed RLS and 411 automated tests. |

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | Java \| C# \| SQL \| TypeScript \| JavaScript \| Python |
| **Backend Frameworks** | Spring Boot \| Virtual Threads \| Spring WebFlux \| Spring Security \| ASP.NET Core (.NET) \| JPA / Hibernate \| Entity Framework Core \| JDBC |
| **Messaging & Security** | RabbitMQ (Retry Queues / TTL, Dead-Letter Queue, CloudEvents) \| Transactional Outbox \| Choreographed Sagas \| Keycloak OIDC \| JWT & RBAC |
| **Databases** | PostgreSQL \| MySQL \| Relational Modeling (3NF) \| Indexing & Partitioning \| Row-Level Security (RLS) \| ACID Transactions & Concurrency \| Query Optimization |
| **Testing & Observability** | JUnit \| xUnit \| Unit, Integration & Concurrency Testing \| k6 (Load Testing) \| OpenTelemetry & Jaeger |
| **DevOps & Tools** | Docker & Docker Compose \| CI/CD (GitHub Actions) \| Git \| Linux / Nginx \| DBeaver \| Swagger / OpenAPI \| Maven \| n8n (OCR & RAG) |
| **Architecture & Practices** | Clean Architecture \| Domain-Driven Design (DDD) \| Event-Driven Architecture \| SOLID \| Idempotency & Concurrency \| API-First \| Agile / Scrum |

## PROFESSIONAL EXPERIENCE

### Back-End Programming Instructor (Java)

*SENAI / FAETEC | Aug 2026 - Oct 2026 (Contract) | Nova Friburgo, Brazil*

- Taught a class of 10 students in Back-End Programming covering programming logic, relational databases with **DBeaver and PostgreSQL**, **OOP in Java**, and **REST APIs with Spring Boot**, closing with an integrative project.
- Created all teaching material (exercise PDFs, summaries, tutorials and support resources) from the institution's syllabus, plus one-on-one support for students.

### Full-Stack / Back-End Developer (Software Residency)

*Serratec - TIC/Software Residency | Feb 2026 - Jul 2026 | Petropolis, Brazil | 790 h*

- Completed a 790-hour intensive programme with strong emphasis on **PostgreSQL Databases**, **OOP in Java** and **RESTful APIs with Spring Boot and Spring Security**, closing with a corporate MVP delivered under contract in partnership with **Zeiss**.
- Designed and implemented layered backend architectures (Controller, Service, Repository, DAO, DTOs), 3NF relational schemas, JWT/RBAC authentication and API integrations in an Agile team (Scrum, Git and Code Review).

## PROJECTS

### Zeiss - AI Recommendation Platform

*Collaborative (11 devs, 1 PO, 1 SM) | 2026 | Java | Spring Boot | Spring WebFlux | PostgreSQL | JWT (RBAC) | n8n (OCR & RAG) | OpenAPI - Serratec Final Project · Corporate MVP (contract)*

- Enterprise REST API in **Java, Spring Boot and PostgreSQL** featuring non-blocking prescription streaming via **Spring WebFlux** `WebClient` to an OCR and AI pipeline (n8n/RAG), extraction scoring and Zeiss lens recommendation.
- Stateless JWT authentication with three-tier RBAC (admin, manager, staff), session IP auditing, commercial sales state machine (`RECOMMENDED`, `SOLD`, `CANCELLED`) and full CRUD documented via Swagger / OpenAPI.

**FleetOps API (C# / .NET) - github.com/DevYuriVieira/fleetops-api**

*Personal | 2026 | C# | .NET | ASP.NET Core | PostgreSQL | Entity Framework Core | RabbitMQ | Keycloak OIDC | OpenTelemetry | xUnit*

- Distributed, event-driven fleet and logistics REST API engine in **C# and .NET** (27 endpoints across 5 DDD Bounded Contexts: Vehicles, Drivers, Deliveries, Routes and Maintenance) with Clean Architecture, operating as an OAuth 2.0 / OIDC Resource Server with **Keycloak (RS256/JWKS)** and RBAC across four roles.
- Implements **Transactional Outbox** integrated into DbContext eliminating dual-write hazards, optimistic concurrency via PostgreSQL `xmin`, concurrent polling via `FOR UPDATE SKIP LOCKED`, **RabbitMQ** messaging (Publisher Confirms, TTL retry queues and DLQ), idempotent consumer by `MessageId` and distributed tracing with OpenTelemetry and Jaeger.
- Suite of **300 automated tests** (166 unit and 134 integration/concurrency/fault-injection) in xUnit with 100% pass rate and empirical throughput of **278 sustained RPS** under ACID domain writes in k6 load tests.

**FarmFlow - Distributed Agri-Tech Platform (Java) - github.com/DevYuriVieira/farmflow-backend**

*Personal | 2026 | Java | Spring Boot | Virtual Threads | PostgreSQL | RabbitMQ | Keycloak OIDC | OpenTelemetry | k6*

- Authorial distributed platform engineered for critical agro-industrial field operations: **Java with Virtual Threads and Spring Boot** backend sustaining **2,450 req/s** in k6 load tests with zero 5xx errors, built for IoT pivot/silo telemetry and MAPA regulatory compliance.
- Consistency without dual-writes: **Transactional Outbox** over RabbitMQ (CloudEvents, Publisher Confirms, DLQ), concurrent polling via `FOR UPDATE SKIP LOCKED`, choreographed sagas with advisory locks (`pg_try_advisory_xact_lock`) and end-to-end distributed tracing with OpenTelemetry.
- Data and security at scale: **PostgreSQL** with declarative time-series partitioning, BRIN indexes and **fail-closed Row Level Security**; Keycloak OIDC with IDOR enumeration protection (404 instead of 403) and **411 automated tests** executing under 100 Virtual Threads.

**Spring Boot E-Commerce API - github.com/DevYuriVieira/ecommerce-serratec-api**

*Collaborative (5 devs - Serratec Residency) | 2026 | Java | Spring Boot | Spring Security | PostgreSQL | JPA/Hibernate | Swagger/OpenAPI*

- Team-developed RESTful API in **Java and Spring Boot** structured in decoupled layers (Controller, Service, Repository, DTOs), managing order lifecycles with N:N mappings, dynamic item totalization and concurrent inventory control.
- Robust security via **Spring Security filter chain (stateless JWT / RBAC)**, integration with external ViaCEP API for automatic address resolution, transactional email notifications with JavaMail, global exception handling (`@ControllerAdvice`) and OpenAPI / Swagger UI contracts.

**Payroll System - github.com/DevYuriVieira/payroll-system-java**

*Collaborative (4 devs - Serratec Residency) | 2026 | Java | PostgreSQL | JDBC | MVC & DAO Architecture | Singleton Pattern | Batch Processing (CSV)*

- Automates batch processing and progressive **INSS and IRRF** payroll tax calculations with dependent deductions, reading employee data via CSV and persisting through **raw JDBC on PostgreSQL** in a layered **MVC + DAO** architecture built without an ORM.
- Exact monetary precision with `BigDecimal (RoundingMode.HALF_UP)`, **Singleton** JDBC connection manager, custom domain exceptions (`CpfInvalidoException`, `SalarioInvalidoException`) and automated CSV report export.

**Dental Clinic Management System (DCMS) - github.com/DevYuriVieira/dentacare-management-system**

*Collaborative (6 devs - Serratec Residency) | 2026 | PostgreSQL | Advanced SQL (DDL, DML, DQL) | 3NF Modeling | Indexing & Analytical Queries*

- Transactional relational database in **PostgreSQL** strictly normalized up to **3rd Normal Form (3NF)**, centralizing appointment lifecycle workflows, N:N associative clinical procedure histories and dentist records (CRO) with zero orphan data.
- Enforces domain rules via DDL constraints (document format validations, temporal logical checks and unique keys), strict referential integrity, strategic B-Tree indexes and analytical SQL queries for operational and revenue reporting.

## EDUCATION

**Postgraduate Degree - Software Engineering**
Estacio University | 2024–2025

**Technology Residency - TIC/Software Full-Stack (790 h)**
Serratec | Feb 2026 - Jul 2026

**Technology Residency - TIC 12 (120 h)**
Universidade Estadual do Ceara (UECE) | Oct 2025 - Dec 2025

**Bachelor's Degree - Industrial Engineering**
Estacio University | 2017 - 2022

## CERTIFICATIONS

› **Programming in Python (Django) (168 h)** - Senac
› **Philips Full-Stack Developer Bootcamp (Java, Spring Boot, SQL) (132 h)** - DIO
› **SQL Database - Intermediate and Advanced** - Instituto Matera
› **Software Testing Fundamentals (24 h)** - Instituto de Pesquisas Eldorado
› **White Belt - Lean Six Sigma** - Frons

## LANGUAGES

**Portuguese** Native | **English** Advanced (B2+) | **Spanish** Advanced (B2+)
